Job Description

Full Stack Engineer

About Clientshare

Clientshare is a London-based tech startup working with mid-market and large B2B enterprises across ITO, BPO, RPO, FM and Logistics in the UK and US. Our Pulse platform is the world-leading solution for businesses to create, deliver, measure and act on Business Reviews. Clientshare is already used by 1-in-2 FTSE 100 companies, including Compass Group and Mitie.

Why Clientshare?

This role offers a unique opportunity to be an integral part of a rapidly growing business. We are client-obsessed, genuine and results-focused in everything we do, and we have a lot of fun celebrating our achievements.

About the role

The successful candidate will have the opportunity to work on a growing B2B SaaS product to craft solutions that increase customer satisfaction and retention for our users.

The role gives the opportunity to be involved in all areas of development, from feature planning to implementation and deployment, working in a small product engineering focused team.

What you will be doing

- You will be crafting solutions to our customers key problems, working closely with our senior and lead engineers.
- You will be working on scaling our application for our ever-growing customer base and US expansion.
- As a Full Stack Engineer, you will have opportunity to apply your skills and experience as well learn new skills in different areas of our stack.
- You will be writing testable, scalable and efficient code whilst refining your ability to balance trade offs between overly complex and simple solutions.
- You will learn our domain and work with the team to move the needle on our key metrics, going above and beyond just delivering a feature.

Minimum qualifications

- Minimum 3 years' experience in web development
- Expertise in PHP (Laravel) and PostgreSQL databases
- Exposure to React
- Hands-on experience building and working with REST based APIs
- Experience utilising CI/CD tools for automating builds, tests and deployments
- Good communication and teamwork skills, experience and/or interested in pair/ensemble programming as well as working independently
- Hands-on experience with cloud-based service providers such as AWS
- Well versed using Git/GitHub

Desired qualifications

- Experience working on a public-facing API
- Experience building CRM integrations (MS dynamics, Salesforce, HubSpot etc.)
- Experience working at a B2B SaaS product company building enterprise grade features
- Experience working in a 'Product Engineering' and/or Extreme Programming (XP) environment
- Computer Science or similar degree

Salary & benefits

- Competitive salary
- Private healthcare
- Hybrid working
- Central London office location
- Daily breakfast and snacks
- Wellness events
